Parasite Protocol Workshop

We are focusing on changing the terrain within the human body for which Parasites are allowed to thrive....

Parasite Protocol Instructions

- **Begin taking Diatomaceous earth (Adults: 1 tbsp. daily) (Children 1 tsp. daily) in the morning, 20-30 minutes (at least) before food:** mixed in ½ - 1 cup of water with a touch of lemon to cut the chalky flavor. To be drunk in all at once. This is to be continued daily for 4 – 6 weeks.

***As there is no use of merely expelling the worms and as the disordered condition of the system which is favorable for the development and support of the worms has to be corrected, we have to treat them with anti-psoric remedies.* - James Tyler Kent**

So, while on DE, give:

- Two doses of **Cina 200**, (Split dose. 2-3 doses in a 12 hour period of time)
- 2 days later take: **Sulphur 200 (split dose)** Wait one week, take another split dose...You may/ may not have noticed the discharge of the Tapeworm or worms at this point....either way, go to step 3.
    - Dr. Hahnemann's Chronic Diseases (p. 1568), symptoms 891-6: Ascarides pass with the stool. Frequent passage of single ascaride. The ascarides cause itching in the rectum. Lumbrici pass off after violent pains in the abdomen, with a hard stool. Tapeworm discharged with a hard stool, etc. ....but the DE will kill and dry up most of the parasites, therefore they may not be seen.
- Then after eight days of the Sulphur, give **Calcarea carb. 200, (Split dose)** which has double the action of Cina. Calcarea removes the excessive acid condition. So it improves the condition of the patient and worms disappear.
    - ***Never give Sulphur after Calcarea carb., as it works havoc.
- If the Protocol must be repeated, give a split dose of:
    - Lycopodium 200c, and repeat Sulphur first and after six weeks, then Calcarea carb.
- Calcarea is a very valuable remedy to eradicate the disposition to worms. Even Calcarea carb. can remove ascarides and tapeworm.

The Picture of Cina - James Tyler Kent

"A sure sign of worms," the mother says. Child rubs its nose with the hands or on the pillow or on the nurse's, shoulder. Child bores into the nose until the blood come. The sickly aspect is striking, but it is representative of brain trouble, central trouble. The brain symptoms are the highest and most important. It frightened, whipped, or scolded, the brain is disturbed and the stomach disordered. They get indigestion and breed worms; white or blue appearance about the mouth, grinding of the teeth during sleep. Before the child has teeth it has a chewing motion, a side to side movement. Sensitiveness of the teeth to the cold air and cold water.
